1 Some Summary Statistics

Presence of actors

Table 1: Presence of actors

Variable	Mean	Std. Dev.	Min.	Max.	N

We decompose who showed up in all the possible combinations; we use 1,2,3,4 subscripts to denote the different parties 1: Employee; 2: Employee's Lawyer; 3: Firm; 4: Firm's Lawyer.

Update in beliefs

The update in beliefs is measured in relative terms, this is the percentage deviation of the exit survey with respect to the entrance survey

$$\frac{exit - initial}{initial}$$

We provide two measures: Update in beliefs in probability and payment.

Table 4: Update in beliefs

Variable	Mean	Std. Dev.	Min.	Max.	N

Initial beliefs

Employee

Employee's Lawyer

Firm's Lawyer

The histograms are trimmed at the 90 percentile in the case for amount. Width of bins are \$50,000 pesos for the case of amount and 10% for the case of probability.

Update in beliefs

Employee's Lawyer

Firm's Lawyer

The histograms measures the update in relative terms. Width of bins is 0.25

Now we test difference in initial and exit survey in expectations. The following table shows the results.
